Software Engineering graduate with 2+ years in e-commerce, advertising and operations at a B2B company selling into the US. Since mid-2026 I build software mainly with **AI coding agents (Claude Code, Codex)**: writing the rules agents work under, splitting work across **parallel agent sessions**, and verifying output with tests before anything merges. I helped build **LLM features running in production** on the Shipstar 3PL platform (a copilot that retrieves data through tool calling, vision invoice reading, AI listings for Shopee / TikTok Shop), wrote **Python scripts to migrate and reconcile data**, built a platform with an **MCP server and Agent API for outside AI agents**, and packaged a desktop AI assistant with my mentor. I understand what founders, ops and marketing need because that is the work I do every day.

SKILLS

AI agents & LLMs	**Claude API** (tool calling, vision, streaming, prompt caching, web search); data retrieval for LLMs through tools, product catalog in context; Claude Code, Codex (agentic coding, parallel sessions on git worktrees); CLAUDE.md / AGENTS.md, skills; **hand-written MCP server** (JSON-RPC 2.0 over stdio); agent permission design: scoped keys, human-in-the-loop; running an LLM agent with tool calling, memory, skills, sub-agents (Hermes Agent)
Backend & data	**Python** (scripts to transform, load and reconcile data); TypeScript, Node.js, Fastify, REST API, zod; PostgreSQL, Drizzle ORM, Supabase (RLS, RPC, Edge Functions, pg_cron); Excel / CSV parsing; accent-insensitive Vietnamese search (pg_trgm + unaccent)
Frontend	React, Next.js, React Router, responsive HTML / CSS, WordPress
DevOps & quality	Docker Compose, Caddy, GitHub Actions CI (tests on a real PostgreSQL, migrations, secret scanning), Vercel; Vitest, Playwright, axe; TDD
E-commerce & martech	Meta Ads, Google Ads, GA4, GTM, Looker Studio; Shopee / TikTok Shop API, Temu / Walmart order flows, bulk shipping labels, e-commerce P&L reporting; Zoho, Odoo, MISA
Languages	Vietnamese (native); English: technical documentation, website content for the US market

AI AGENT PROJECTS

MIA Platform · sells and provisions AI assistants · solo — 09/2026 – 10/2026

- **Agent API + MCP server for outside AI agents** (Claude Desktop, Claude Code, n8n): agents read admin data with scoped keys; **agents cannot write directly**, every write becomes a proposal waiting for human approval. The MCP server is hand-written with no external libraries, and keys never leak into tool results.
- Website, customer portal and admin: orders, VietQR payments, MIA Agent plan provisioning; designed the control plane that allocates quota through an LLM API gateway (NewAPI).
- **Orchestrated parallel Claude Code sessions**: a manager session splits work into FE / BE lanes against an API contract, keeping a decision ledger and test evidence — 1,000+ commits.

Stack: TypeScript monorepo · Fastify · Drizzle · PostgreSQL · zod · React · Docker Compose · Caddy · GitHub Actions · Vitest · Playwright

MIA Agent · desktop AI assistant · with my mentor — 09/2026

- Packaged and localised **Hermes Agent** (Nous Research's open-source LLM agent) into the MIA Agent desktop app: Electron with a Python backend; the agent handles tool calling, memory, skills, MCP, cron schedules and sub-agents across multiple LLM providers.
- Researched and documented the agent architecture in Vietnamese: LLM layer, tools, memory, context compression, messaging gateway, plugins / MCP and security.

EXPERIENCE

Digital Marketing Executive — 03/2024 – Present

TP PLASTIC · Ho Chi Minh City · Full-time

> *A B2B plastics manufacturer expanding into the US market. Owned all digital marketing and websites — no agency, no dev team.*

- **24/7 lead-screening chatbot** on tpplasticusa.com, capturing after-hours inquiries previously lost to the Vietnam–US time difference.

- **Built the company's first measurement stack, GTM + GA4 + Looker Studio**, tying every inquiry back to the channel that produced it.
- **Managed data flows across 4 systems** (Zoho, Odoo, MISA, Shipstar): lead intake, deduplication, pipeline design, sales-data cleanup.
- Ran Meta & Google Ads at **$1,000+/month**, lifting lead conversion rate **35%**; built and ran 8 websites and 11 social channels.

> **Product & Developer — Shipstar** · 3PL platform Vietnam → US, concurrent **06/2026 – 30/09/2026**
>
> - **Helped build AI features on the Claude API:** an internal copilot that retrieves data through tool calling across 143 database functions, with every write requiring user approval; reading Costco invoice photos into structured line items and checking totals; email classification and drafted replies; an MCP server with OAuth; voice AI sales calls over Twilio.
> - **AI listings for Shopee / TikTok Shop** from a product name or link: Firecrawl reads the source page, Claude writes Vietnamese copy, picks the category and fills required attributes; items are created hidden / as drafts for human review before publishing.
> - **Data processing and preparation:** wrote Python scripts to move MISA accounting data into Shipstar, loading **8,684 records with zero variance**; imported a catalog of about 650 SKUs (dimensions, weight, HS code, materials, prices, stock per warehouse, shelf location).
> - Shipped features to shipstar.vn in production with **Claude Code and Codex**: **500+ commits** in 08–09/2026, on a codebase with 100+ Edge Functions and hundreds of tables.
> - E-commerce P&L reports (marketplace fees, pre / post tax); bulk shipping-label purchase; Postgres RPC data permissions for the sales-agent role; fixed query timeouts and paging past the 1,000-row limit.
> - **Wrote the working rules for agents** (AGENTS.md for Codex, the deploy flow in CLAUDE.md), ran multiple agents in parallel on separate git worktrees; designed the seller-portal UI/UX and mobile warehouse flows.

Software Deployment Staff — NINA · full-time **06/2023 – 12/2023**

Analysed requirements, developed and deployed client websites; cross-browser testing before release.

Front-end Developer — MYVINA · internship **12/2022 – 03/2023**

Built responsive interfaces from design files; a reusable HTML/CSS component set; optimised page load speed.

Website Administrator — DEEP VIETNAM · part-time · site content, CMS maintenance **05/2022 – 10/2022**

OTHER PROJECTS (BUILT WITH CLAUDE CODE)

Tinh Hoa — B2B e-commerce site selling and renting office equipment: cart, checkout, rentals with deposits and double-booking checks, admin panel, order emails (Next.js 15, Supabase, Resend, Vercel) **08/2026**

EstateHub CRM — multi-user CRM with subscription plans; client pipeline, RLS; automated follow-up reminders via pg_cron + Edge Function + Web Push (Next.js 16, Supabase) **07/2026**

EDUCATION

Bachelor of Software Engineering — Ho Chi Minh City University of Foreign Languages – Information Technology (HUFLIT) **2019 – 2023**
