Software Engineering graduate with 2+ years in system administration, running the internal systems of a B2B company selling into the US. I manage Zoho, Odoo and MISA and train other departments to use them, and I developed and rolled out Shipstar, the internal system that automates order processing and reporting. Since 2026, I have been bringing AI into these workflows.

SKILLS

AI workflows & internal assistants	Designing AI workflows with a human approval step; an AI assistant that looks up internal data; reading documents with AI vision; email classification and drafted replies; AI-written listing content; automated order, shipping-label and reporting flows
AI tools	**Claude** (Claude API, Claude Code), **Codex**; writing prompts, skills and rule files for AI agents (CLAUDE.md / AGENTS.md); MCP; connecting outside AI agents (Claude Desktop, Claude Code) through a permissioned API
Process & documentation	Mapping processes with the people who run them and finding repetitive work; simplifying warehouse workflows; writing functional specs, deployment / rollback procedures, and Vietnamese documentation of an AI agent's architecture
Rollout & training	Training accounting, content marketing, sales and customer service staff on CRM / ERP (Zoho, Odoo) and MISA accounting software; rolling Shipstar out across departments
Operations systems	Zoho, Odoo, MISA, Shipstar; Shopee / TikTok Shop, Temu / Walmart order flows, shipping labels, e-commerce P&L reporting; GA4, GTM, Looker Studio; Meta & Google Ads
Integration & code	Python (data transformation and reconciliation), TypeScript, REST API, PostgreSQL / Supabase, Excel / CSV; writing custom code where off-the-shelf tools fall short
Security & quality	Human-in-the-loop for every write; scoped, read-only access keys; testing before release; secret scanning
Languages	Vietnamese (native); English: technical documentation, website content for the US market

EXPERIENCE

Digital Marketing & System Admin

03/2024 – Present

TP PLASTIC · Ho Chi Minh City · Full-time

> *A B2B plastics manufacturer expanding into the US market. Owned digital marketing, websites and operations systems — no agency, no in-house dev team.*

- **Trained staff across departments** (accounting, content marketing, sales and customer service) on **CRM / ERP (Zoho, Odoo) and MISA accounting software**.
- **Managed data flows across 4 systems** (Zoho, Odoo, MISA, Shipstar): lead intake, deduplication, pipeline stage design, sales-data cleanup.
- **24/7 lead-screening chatbot** on tpplasticusa.com, capturing after-hours inquiries previously lost to the Vietnam–US time difference.
- **Built the company's first measurement stack, GTM + GA4 + Looker Studio**, so sales could see which channel produced closed deals.
- Ran Meta & Google Ads at **$1,000+/month**, lifting lead conversion rate **35%**; built and ran 8 websites and 11 social channels.

Product & Developer — Shipstar · 3PL platform Vietnam → US, concurrent, team of 3

06/2026 – 09/2026

- **Developed and rolled out Shipstar company-wide**: trained staff in each department to use it; worked alongside the warehouse and dev teams to pin down requirements and test real flows before release.
- **Automated repetitive work**: the system pulls orders from e-commerce marketplaces, buys shipping labels in bulk and generates sales and e-commerce P&L reports (marketplace fees, pre / post tax), cutting staff's manual data entry.
- **Simplified warehouse workflows**: turned receiving, order splitting, packing and per-carrier shipping-fee reconciliation into minimal steps on a phone for warehouse staff.
- **Internal AI assistant** that answers operations questions (stock, orders…) by calling **143 data functions**; every write needs the user's approval before it runs.

- **AI for accounting and customer service**: reads invoice photos into structured line items and checks the totals; classifies incoming email and drafts replies.
- **AI for e-commerce content**: writes Shopee / TikTok Shop listings from a product name or link and picks the category; items are created hidden / as drafts for human review before publishing.
- **Data standardisation**: Python scripts moved **8,684 MISA accounting records** into Shipstar with **zero variance**; imported about 650 SKUs with dimensions, weight, prices, stock per warehouse and shelf location.
- Wrote the working rules for AI agents (AGENTS.md, CLAUDE.md) and developed with Claude Code and Codex: **500+ commits** to the live system.

Software Deployment Staff — NINA · full-time 06/2023 – 12/2023

Turned client requirements into functional specs, then built and deployed them; **wrote deployment and rollback procedures** so the whole team could repeat each release.

Front-end Developer — MYVINA · internship 12/2022 – 03/2023

Built responsive interfaces from design files; a reusable component set.

Website Administrator — DEEP VIETNAM · part-time · site content, CMS, user permissions 05/2022 – 10/2022

OTHER AI & AUTOMATION PROJECTS

MIA Platform · sells and provisions AI assistants · solo 09/2026 – 10/2026

- A gateway that lets **outside AI agents** (Claude Desktop, Claude Code) read admin data with scoped keys; **agents cannot write directly**, every write becomes a proposal waiting for human approval.
- VietQR payments; AI assistant plans are provisioned automatically once a customer pays.

MIA Agent · desktop AI assistant · with my mentor 09/2026

- Packaged and localised Hermes Agent (open source, Nous Research) into a desktop app; the agent has tools, memory, skills, scheduled runs and sub-agents.
- **Wrote Vietnamese documentation** explaining the agent architecture: LLM layer, tools, memory, context compression, security.

EstateHub CRM — multi-user CRM; client pipeline; **automated follow-up reminders** via scheduled jobs and Web Push 07/2026

Tinh Hoa — B2B e-commerce site selling and renting office equipment; lead forms, automatic new-order emails 08/2026

EDUCATION

Bachelor of Software Engineering — Ho Chi Minh City University of Foreign Languages – Information Technology (HUFLIT) 2019 – 2023
